

positioned behind the contact membrane, is realised in silicon through microprocessing techniques.

The micro structure includes the measurement membrane and piezoresistors.

The minimum deflection required by the sensitive element makes it possible to use very robust mechanics.

The process contact membrane can be up to 35 times thicker than the membrane used in traditional Melt sensors.

ADVANTAGES

- Total compatibility with the European RoHS Directive
- High strength
- Long life
- Working temperature: up to 350°C
- Excellent read stability over time
- Fast response time < 1ms

MAIN FEATURES

- Pressure ranges up to 3000 bar for dynamic applications
- Accuracy 0,5%
- Standard threading 1/2-20UNF
- Contact diaphragm with diameter reduced by 7.8 mm for installation in nozzles
- Autozero function on board / external option
- Sensor housing is smaller, with flexible diameter for easy installation in very narrow areas
- Remote electronics
- Available outputs: 0-10 V (N) or CAN Open (D)
- Software selection of Baudrate and Node-ID (option D)
- Setpoint function and 2 settable alarm setpoints (option D)
- Multi-patented product

GTP (advanced protection)

Coating is highly resistant to corrosion, abrasion, and high temperatures

AUTOZERO FUNCTION

All signal variations in the absence of pressure can be eliminated by using the Autozero function. Function is activated via external autozero or SDO CANopen.

The procedure is permitted only with pressure at zero".

The Autozero function should be activated ONLY when the sensor is completely installed on the system.

The "IMPACT" series of Gefran, are pressure transmitters, without transmission fluid, for using in High temperature environment (350°C).

Medium pressure is transferred directly to the sensitive silicon element via a thick diaphragm.

Strain is transduced by a micro-worked silicon structure (MEMS).

The operating principle is piezoresistive. "IMPACT" is Gefran's exclusive series of high-temperature pressure sensors that use the piezoresistive principle.

The main characteristic of "IMPACT" sensors is that they do not contain any transmission fluid. The sensitive element, directly

TECHNICAL SPECIFICATIONS

Accuracy (1)	±0,5%FSO
Repeatability	±0,2%FSO
Measurement range	3000bar / 40000psi
Overpressure without degrading	3500 bar
Measurement principle	Piezoresistive
Power supply	15...30Vdc (N), 12...40Vdc (D)
Maximum current absorption	25mA (N) 40mA (D) (2)
Insulation resistance (at 50Vdc)	>1000 MOhm
Output signal Full Scale FSO	10Vdc (N) Depends on FSO (D)
Zero balance tolerance (tolerance ± 0.25% FSO)	0Vdc (N) 0 (D)
Zero signals adjustment (tolerance ± 0.25% FSO)	"Autozero" function
Maximum allowed load	1mA
Response time (10...90% FSO)	1ms (N) 0,5ms - 2kHz (D)
Output noise (RMS 10-400Hz)	< 0.025% FSO
Output short circuit ingress and reverse polarity protection	YES
Housing compensated temperature range	0...+85°C
Housing operating temperature range	-30...+105°C
Housing storage temperature range	-40...+125°C
Sensor compensated temperature range	+20...+350°C
Maximum diaphragm temperature	350°C / 660°F
Zero signal variation due to process temperature variation in range (100-350°C)	< ± 1%FSO
Full-scale signal variation due to process temperature variation in range (20-350°C)	< ± 1%FSO
Contact diaphragm with process	15-5 PH GTP
Protection degree	IP65
Electrical connection (0-10 V output)	6-pin / 7-pin / 8-pin connector
Tightening torque	30...45Nm
CANopen OUTPUT (D)	
Protocol	DP404 CANopen, with Baudrate selectable from 10k to 1MB (Default 500KB)
Electrical connection	5 pin M12, DIN EN50044 connector

FSO = Full scale output

(1) BFSL method (Best Fit Straight Line): includes combined effects of Non-Linearity, Hysteresis and Repeatability.

(2) Connections: 24VDC power supply

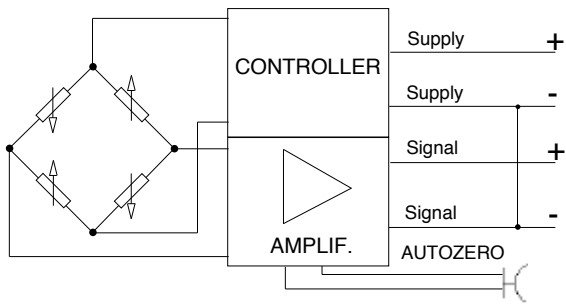

(3) Resolution: 0,01 bar da 35...500bar
0,1 bar da 700...300bar
0,1 psi da 500...5000psi
1 psi da 7500...40000psi

MECHANICAL DIMENSIONS

ELECTRICAL CONNECTIONS

OUTPUT VOLTAGE (N) 15...30VDC power supply

The shield is connected to the transducer body.

6-pin	7-pin	8-pin
